

evway's users will be able to locate and use the Enel X's charging stations in Italy

Enel X signs an agreement with Route220 for the interoperability of the charging network

Rome, September 18th 2018

Enel X, the Enel Group company dedicated to innovative products and digital solutions, has signed an agreement that as of October will enable the interoperability of Enel X's charging infrastructure with that of evway by Route220, a company that offers integrated services for electric vehicle owners. The agreement will allow users of the evway app to charge their electric vehicles at Enel X's charging stations installed throughout Italy, accessing information on the location of the stations, the power available, the type of plugs and access modes. Users will be able to use the Quick 22 kW stations in urban areas and the Fast 50 kW facilities for fast vehicle charging.

"The agreement with evway by Route220 confirms our commitment to promoting an open model to enable the use of our charging network", said Alberto Piglia, Head of e-Mobility at Enel X. "Our goal is to open our infrastructure to other operators by offering a high-quality service to make life even easier for those who drive electric cars."

"We are proud to have been selected by Enel X as an Italian interoperability partner", remarked Carolina Solcia, CEO of Route220. "This important agreement strengthens our business model, which promotes opportunities to welcome the stakeholders of electric mobility in Italy." Franco Barbieri, founder of Route220, said "This agreement rewards our efforts, which began in 2014, through the value that Enel X is also bringing to independent operators in this new sector".

To foster the development of electric mobility in Italy, Enel has launched a plan for electric vehicle charging infrastructure that envisages the installation of about 7,000 stations by 2020, increasing to 14,000 by 2022, with an investment of between 100 and 300 million euros. The charging network will consist of Quick stations (22 kW) in urban areas and Fast (50 kW) as well as Ultra Fast (from 150 kW to 350 kW) stations for rapid charging in extra-urban areas. The urban charging network will complete the extra-urban system financed by the EVA+ project (Electric Vehicles Arteries), co-funded by the European Commission, which provides for the installation over three years of 180 charging stations along Italian extra-urban corridors.

In the area of interoperability, Enel X has also signed other agreements to allow customers to recharge their vehicles at charging infrastructure operated by other companies. Enel X has already signed interoperability agreements with Hera, Iren and Alperia.

About Route220

Route220 was founded in 2014 as innovative start up with the aim of providing a revolutionary and complete service for the ev-drivers, improving the time of the charging, promoting the business and touristic facilities and the territories that believe in sustainable mobility.

Hence the idea of evway: a complete service including the charging station, the digital platform and innovative services for e-mobility and the sustainable drivers.

The evway App, developed by Route220, is free for IOS, Android and WindowsPhone. It provides a complete and interactive mapping of all charging stations in Italy and Europe, together with the mapping of the nearby points of interest and facilities (<https://evway.net/app/>).

The map becomes a way to give visibility and to promote all facilities that offer the ev-drivers the charging service.

evway is the only Italian network that is interoperable with other European networks: the charging stations of Route220 can be activated with the evway App and other European Apps that belong to the network; at the same time the App allows to manage the charge on more than 18.000 European charging points of this network.

This way the ev-driver will easily find the charging station that better suits his needs and manage the charging, making the best of his time, transforming the pause into a real experience.

The evway network is open to all operators that, just like us, believe in the interoperability of the charging stations as useful tool for the development of electric mobility.

evway is the European network, innovative and dynamic, whose numbers are steadily increasing:

- >150.000 charging points in Europe, of which 3700 in Italy;
- >60.000 charging points in Europe that can be activated with App or KeyHanger;
- >210 installed charging points in Italy;
- + 5.000 downloads of the App;
- 65.000 users in the whole of Europe.

The company has its registered office in Milan and two operating offices in Bolzano and Trento.

Franco Barbieri, President and founder of the company, shares his idea with Carolina Solcia, Chief of Execution, both with years of experience in the field of the management and now playing a leading role for electric mobility and in Route220. During the years the team has increased and now has 12 co-workers, professionals in the different fields such as sales & marketing, communication, tourism marketing, EVSE technology, digital platform and database management.
